* write a program which creates two threads; one thread displaying 'BMS College of Engineering' once every ten seconds and another displaying "CSE" once every two seconds

→ class displayMessage implements Runnable {
String message;
int interval;

displayMessage(String message, int interval) {
this.message = message;
this.interval = interval;
}

public void run() {
while (true) {
System.out.println(message);
try {
Thread.sleep(interval * 1000);
} catch (InterruptedException e) {
System.out.println(e);
}
}
}

public class multiT

public static void main (String args[]) {
Thread t1 = new Thread (new displayMessage
("BMS College of Engineering", 10));
Thread t2 = new Thread (new displayMessage
("CSE", 2));

t1: start C1;

t2: start C2;

Output

CSE

CSE

CSE

BMS College of Engineering

CSE

CSE

CSE

CSE

CSE

BMS College of Engineering

CSE

CSE

CSE

CSE

CSE

~~BMS College of Engineering~~
